

## **Elden Street Traffic Study**

MCV staff participated in this study for the Town of Herndon. Elden Street is a historic street with a significant growth in traffic volumes. Turning movement counts were made at several intersections and the existing conditions were established. Capacity and levels of service were estimated. Alternative solutions were developed and evaluated including a one way pair system. The goal was to maintain the historic nature, the economic viability of the businesses and traffic flow. The recommended solution consisted of special pavement treatment and sidewalk treatment.
