

Traffic Data Collection for Montgomery County, Maryland

MCV collected traffic volume, class and speed data using portable machines, manual turning movement counts, pedestrian/bicycle counts, manual classification counts and spot speed studies using radar for the County. The traffic count program was conducted for a period ranging from 48 hours to seven days, including weekdays and weekends. The portable machine counts were conducted on the County roadways using road tubes and calibrated equipment. Data collected was processed and provided in hard copy format (TASPLUS) and in electronic format (PEEK 261). This was a one year project with three one year extensions to 2010.
