

Traffic/Air Quality Conformity Analysis for the Richmond/Tri-cities and Hampton Roads Non-attainment Areas

MCV, in association with other consultants conducted this study for the Virginia Department of Transportation. As part of this study MCV obtained regional TIPs and long range plans for the four planning areas of Richmond, Tri-Cities, Peninsula and Southeast portion of Hampton Roads area . This data was input into a data base management system and summarized. The travel impacts of TIP and Long Range Plans for the four areas were determined using off line techniques. MCV provided inputs for running the MINUTP models, edited regional networks for four time periods (1996, 2000, 2005 and 2015) for build and no-build conditions and for each of the four planning areas.
